WEEKLY MORBIDITY REPORT
EXPLANATORY COMMENT

This report presents each week the annual admission rates per 1000 average strength for certain communicable diseases, venereal diseases, and all causes combined (diseases, injuries and poisonings). Source material is the weekly communicable disease reports submitted to BuMed by all shore stations within the continental limits of the United States.

Admission rates are calculated on an annual basis to facilitate comparison with corresponding annual, quarterly or monthly figures. Such annual rates of admission indicate the number of admissions per 1000 average strength which would occur over a year's time if the current week's experience continued for a year. They are obtained as follows:

$$\frac{\text{Number of Admissions During the Week} \times 52}{\text{Average Strength for the Week}} \times 1000$$

In order to make this report promptly available the figures contained herein are presented, in general, as reported. The symbol # indicates that current data are not available. In such cases, the most recent data are utilized.

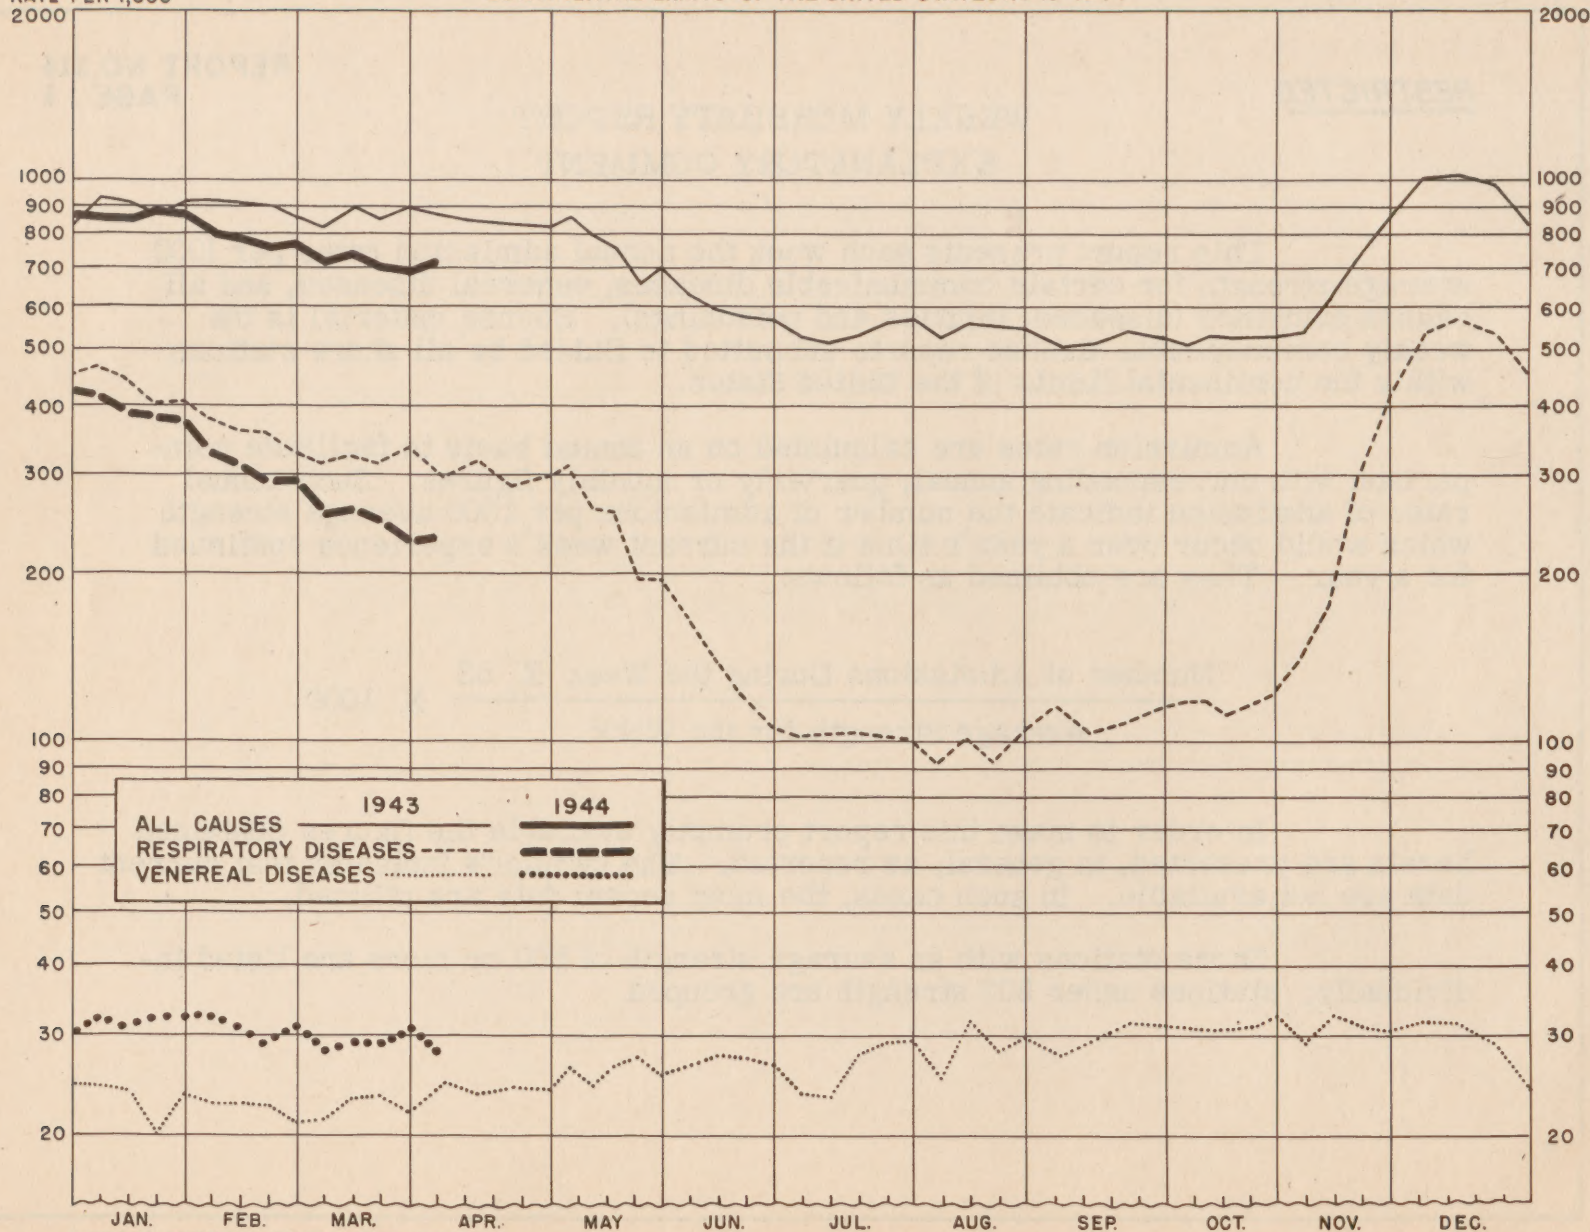

Shore stations with an average strength of 500 or more are listed individually; stations under 500 strength are grouped.

RESTRICTED

FOR CERTAIN RESPIRATORY DISEASES,* VENEREAL DISEASES, & ALL CAUSES,
CONTINENTAL LIMITS OF THE UNITED STATES: 1943-1944

REPORT NO. 118
PAGE 2

RATE PER 1,000

*INCLUDE: CATARRHAL FEVER, ACUTE; INFLUENZA;
PNEUMONIA-BRONCHO, LOBAR & ATYPICAL;
TONSILLITIS, ACUTE (1944 ONLY) PHARYNGITIS, ACUTE (1944 ONLY).

CURRENT TRENDS

Week Ending 1 Apr 1944

After a trend downward for two weeks, the curve for Admissions All Causes turned upward slightly for the week ending April 1, 1944. The Potomac and Severn River Commands reported the highest rate (1323), the 7th District the lowest (446).

The downward trend of the respiratory disease curve was also interrupted by a slight rise. Districts reporting a rise in the rates for these diseases were the 3rd, 4th, 7th, 9th, and 13th. The highest rate was reported from the 9th District (352); the next highest from the 3rd District (332); the lowest rate was reported from the 7th District.

The venereal disease rate dropped to 28, duplicating the rate of the week ending Mar. 4, 1944, which established a new low for the year. The highest rate (44) was reported for the 12th District, the lowest (17) for the 6th and 11th Districts and the Potomac and Severn River Commands.

Influenza and Catarrhal Fever. A slight rise was reported this week for these infections, the first time since the week ending Dec. 11, 1943. Increased incidence in the 3rd, 9th, and 13th Districts was sufficient to more than cancel out the decreases noted in the other Districts. The 3rd District reported the highest rate, the 9th District the next highest, the 13th District the third highest; the lowest rate was recorded for the 7th District. Despite this rise, however, the rate for this fourteenth week of the year remains below that of the comparable week of both 1942 and 1943.

Pneumonia--Broncho and Lobar. The rate for these infections returned to 5 this week. The 13th District, with a rate of 25, was largely responsible for the increased rate. The next highest rate (6) was reported in the 5th District; the 7th District reported the lowest rate (0.81). The curve stands at a point slightly below that for the corresponding week of 1943, slightly above that for 1942.

CURRENT TRENDS-- CONTD.

Pneumonia, Atypical. For the fourth consecutive week the rate for atypical pneumonia was reported as 3. The 11th District continues to report the highest rate (12), three times that of the 13th District which stands in second place with a rate of 4. The 4th District reported no cases. The curve for 1944 to date has stood consistently above that recorded for 1943.

Rheumatic Fever, Acute. After a slight drop to a rate of 3 last week, the curve for this infection again returned to 4. The 13th District reported the highest rate (11); the 9th District the next highest (7); and the 6th District the lowest (0.69). The present rate, though high, still represents a considerable reduction when compared with the rates reported through the four weeks of February.

Scarlet Fever. The drop to 9 this week brought the rate for scarlet fever to the lowest point recorded since the week ending Nov. 6, 1943. The curve now stands for the first time this year at a point below that recorded for the corresponding week of 1943. Increased rates were reported only for the 5th, 6th, and 13th Districts and for the Potomac and Severn River Commands. The highest rate (29) was reported for the 13th District, and the next highest (20) for the 9th District. No cases were reported for the 7th District.

Cerebrospinal Fever, Meningococcic. The rate for this infection continues to be low (0.45) and considerably lower than that registered for the corresponding weeks of 1943. The 1st, 5th, 6th, and 9th Districts and the Potomac and Severn River Commands reported no cases for the week.

Malaria. For the eighth consecutive week the rate for malaria remained at 3. This represents an incidence well above that recorded for the corresponding week of 1943 but well below that recorded for August and September of 1943. The highest rates were reported from the 12th and 11th Districts (8 and 7 respectively). The lowest rate (0.68) was reported from the 8th District.

RESTRICTED

WEEKLY MORBIDITY REPORT

REPORT NO. 118

PAGE 5

CURRENT TRENDS -- CONTD.

Measles. The measles rate stood at the lowest point recorded since the week ending Jan. 1, 1944. This point is below that recorded for the corresponding weeks of 1942 and 1943. The 4th District reported the highest rate (25); the 13th District the next highest rate (22); the 7th District the lowest rate (5).
